

Sales Data Analysis-Data Storytelling & Statistical Validation

ApexPlanet Internship - Task-4

Prepared By: [ontipuli.susmitha](#)

Business Objective

- Analyze sales performance using historical sales data.
- Identify top-performance products, categorical, and cities.
- Discover sales trends over time.
- Provide actionable business recommendations.

Key Findings

- Electronics generated the highest sales revenue.
- Laptops and Mobile products were among the top sellers.
- Bengaluru, Kolkata, and Mumbai contributed significant sales.
- Sales showed fluctuations throughout the year.
- Customer age distribution was centered around middle-aged customers

Dashboard Insights

- Total Sales : 139.40M
- Total Customers: 1000
- Average Customers age : 41.36
- Total Quantity Sold : 5000

Data story

The sales analysis reveals that Electronics is the leading category driving revenue growth. Major cities such as Bengaluru and Kolkata contribute significantly to overall sales. Product demand varies across categories, suggesting opportunities for targeted marketing and inventory planning.

Hypothesis Testing

- H_0 (Null Hypothesis): Product category does not affect sales.
- H_1 (Alternative Hypothesis): Product category affects sales.

Result:

- Different categories show different sales performance.
- Electronics significantly outperforms other categories.

Business Recommendations

Increase focus on Electronics products.

Target high-performing cities with marketing campaigns.

Monitor low-performing categories for improvement.

Use sales trends for inventory planning.

Thank You
